

DESCRIPTION

This 120 W foldable photovoltaic panel is ideal for any getaway. Designed to provide a stable charge to batteries or power stations up to 24 V and power everything from smartphones to small appliances. An efficient and sustainable option to provide energy during motorhome trips that also allows you to connect up to 3 panels to get triple the energy.

Energy for your adventure

Get up to 120 W of solar energy in optimal conditions of orientation and sun wherever you are. The most ecological and environmentally friendly solution ideal to include in camping, expeditions, boats... Thanks to this energy you can get a stable charge of up to 24 V with the MC4 to DC7909 cable included from which you can charge power stations such as those of Ksix, or other devices compatible with that port.

High quality materials

Monocrystalline silicon solar cells, a material that is more sensitive to solar energy, will allow you to charge your solar panel even in unfavorable climates where it is not exposed to completely direct sunlight. This type of silicon is a type of silicon with high purity and a continuous crystalline lattice that offers greater resistance, efficiency and performance.

Get triple energy

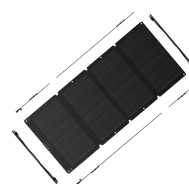

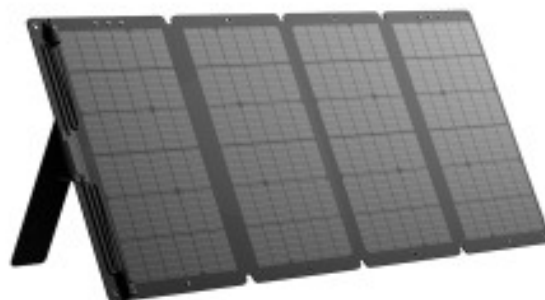

If the 120 W of one panel is not enough, don't worry because its interconnectable system will allow you to connect up to 3 panels with which you can get up to 360 W of energy. Simply connect the panels to the ports provided for this purpose... And that's it!

100% renewable energy

Take care of the planet while you benefit from what it provides us with this solar panel with which you can obtain renewable, inexhaustible and non-polluting energy. Obtain electricity from solar radiation and join the responsible self-consumption.

Foldable and easy to store

Its four-part folding system means that the solar panel takes up as little space as possible. In addition, it includes a protective cover for better conservation and care and a support to place it in the best way to receive the sun's rays.
