DESCRIPTION

Light up your garden or the exteriors of your home with this kit of 4 SmartLED smart spotlights connected to the TuyaSmart app. Thanks to its RGBWIC technology that combines RGBIC colours with 3000K white light, it will be very easy to create personalised and unique atmospheres. Rainproof thanks to its IP65 protection and very easy to attach directly to the wall or to the ground with the help of the included stakes.

White or coloured light?

Fill your garden with light and colour with these 900 lumen, 18W smart lights featuring RGBWIC technology that allows you to synchronise multiple RGB colours at once from your device's screen. Plus, you can select 3000K white light for a calmer, more relaxing ambience.

Control the light from your mobile phone

Turn the light on and off, regulate the power, synchronise it with the music and even programme the lighting hours of your outdoor areas from your smartphone to save energy. All from the comfort of the TuyaSmart or Smart Life apps, making it easy and fun to control the lighting. Available for Android and Apple devices. Also controllable from its integrated remote control or through voice assistants.

Rainproof

The IP65 protection of our spotlight set means that the weather outside is no problem. It doesn't matter if a storm hits because your outdoor lighting will be protected against all kinds of weather. Just protect the socket... and you'll be in control!

Easy and versatile installation

You choose how to place your 4 garden spotlights. If you prefer more indirect lighting, simply drill a few holes in any wall to place them. If you want to illuminate a pathway, simply place your spotlights on a surface of earth or sand using the ground stakes included in the pack.

Expand your lighting

If 4 spotlights are not enough, this set gives you the possibility to attach one more set to its 9,5 metres to get double the illumination. Just connect them with one of the connectors, plug one of the sets into the mains... and that's it!

TECHNICAL SPECIFICATIONS.
