

DESCRIPTION

Light up your garden or terrace in the most sustainable way with our smart solar spotlight. It only needs 6 hours of light to illuminate for up to 8 hours. You can play with the millions of RGB colours or the different CCT white light temperatures from the TuyaSmart app. What's more, it is rainproof and super easy to attach to the wall or to the ground, thanks to its included ground stake.

Integrated solar panel

The solar panel of this spotlight allows you to achieve an autonomy of 6 to 8 hours with only 6 hours of charging. Place your spotlight in a sunny spot and you will be able to illuminate your garden or terrace in the most sustainable way possible thanks to this 5.5V panel with a powerful integrated 2,200mAh 3.7V lithium battery.

Control the light from your mobile phone

Turn the spotlight on and off, regulate the power, synchronise it with the music and even programme the lighting hours of your strip from your smartphone to save energy. All from the comfort of the TuyaSmart or Smart Life apps, making it easy and fun to control the lighting. Available for Android and Apple devices. In addition, with the help of a Bluetooth mesh compatible bridge device you will be able to control it using voice assistants such as Google Home or Alexa.

A game of colours and whites

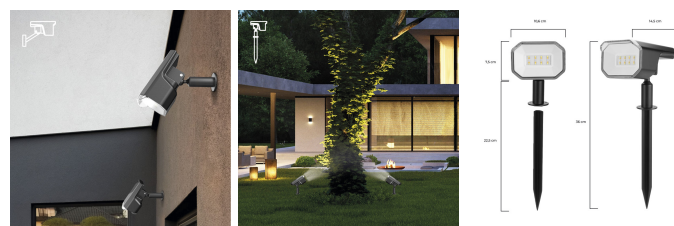

With our SmartLED solar spotlight, there are no limits to the colours. Thanks to the TuyaSmart app's colour wheel, you can select from an infinite number of RGB colours that will fill any outdoor space with light - a play of colours where your fingers are in control! In addition, thanks to its different shades of CCT white light (3000K - 6500K), you will have the right light at any time of the day.

Rain-resistant

The IP65 protection of this solar spotlight means that the weather outside is not a problem. It doesn't matter if a storm hits because your outdoor lighting will be protected against any inclement weather.

Install it and enjoy it

You choose how to place your spotlight. If you prefer to install it in a garden or on a ground surface, you will have to insert the included ground stake into the hole in the bracket. If you prefer to install it on the wall, place the bracket, drill a few holes and fix it to the wall. Once the spotlight is in place and has caught the sunlight, it will automatically switch on when it detects the absence of natural light.

TECHNICAL SPECIFICATIONS.
