

DESCRIPTION

Charge your devices wirelessly thanks to the Ksix Station 2in1. It offers a power of up to 15 W per output, which makes it compatible with fast charging. It incorporates simultaneous charging compatible with smartphones and wireless earphones that contain Qi technology. It features LED indicators that display the charging status at all times.

Forget about cables

With this charger you can charge devices with Qi technology wirelessly. This technology incorporates safety features to ensure safe and secure charging by preventing overheating, short circuits and other potential hazards. Simply place your devices on top of the charging pad and they will be fully charged in very little time. Maximum convenience without cables in the way.

Simultaneous multi-device charging

The Ksix Station 2in1 incorporates two simultaneous charging pads that will allow you to charge two devices at the same time, be they smartphones or wireless earphones. Both charging pads feature 15 W fast charging, offering a total charge of 30 W split evenly between two devices.

LED indicators

The Ksix Station 2in1 features three LED indicators, one red and two blue. The red LED indicator lights up if the charger itself is properly connected to a power outlet and receiving power. The two blue LED indicators display whether the devices placed on the charging pads are charging correctly.

High-quality design

This wireless charging pad has a minimalist design in white. It has very small dimensions of only 10,5 x 20,4 x 1 cm that will allow you to place it anywhere in the house or office. It connects to the power via the included 1-meter USB-A to USB-C cable. To charge devices at full power we recommend using the included cable and a 30 W wall charger compatible with Power Delivery technology and/or Quick Charge 3.0, although any wall charger is compatible, delivering proportional power.

TECHNICAL SPECIFICATIONS.
