

## DESCRIPTION

The KSIX 2025 Automatic Cutting Plotter is the latest technology for cutting screen protectors. Ideal for front screens, this new model offers superior precision and efficiency, delivering custom cuts with higher quality in less time. Additionally, it comes with a complementary machine to optimise the installation of the protectors. The app is constantly updated, ensuring you always have the templates for the latest devices, eliminating the risk of unnecessary stock accumulation.

### Instant stock availability

The extensive database in the app allows you to create protectors up to 26.5 cm wide for smartphones such as the iPhone 15, Samsung Galaxy S23, Xiaomi 13 Pro, Oppo Find X6, as well as smartwatches like the Apple Watch Ultra, Samsung Galaxy Watch 5, and tablets up to 12". With just one machine, you'll save space in your store while producing customised protectors on demand, ensuring you always have the materials you need right when you need them.

### Enhanced film options

This next-generation plotter is designed to deliver precise cuts in two types of films: basic and premium. Both are compatible with most devices, offering scratch resistance and a perfect fit for high-definition screens. Additionally, the premium film provides extra protection and superior durability for a more complete and high-quality experience.

### Integrated Android app

The KSIX 2025 Premium Cutting Plotter, with WiFi connectivity, is managed via its own app, which automatically updates to include the latest devices on the market without any extra effort on your part. The machine is also available in multiple languages, making it easy to use globally without any complications.

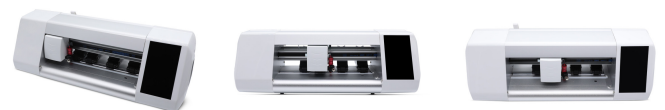

### Advanced HD touchscreen

The KSIX 2025 plotter features a 5.50" full-colour HD LCD touchscreen, from which you can manage cutting options. You can select the device, the type of protector (basic or premium), and other settings, all from a simple and intuitive interface. The front screen protector can be easily and quickly cut from this screen.

### High precision and cutting speed

Thanks to its state-of-the-art stainless steel blade, this plotter achieves a cutting precision of  $\pm 0.082\text{mm}$  and speeds of between 300-500mm/s, delivering optimal results in seconds. Additionally, the smart sensor automatically adjusts the film to prevent misalignment, ensuring a perfect cut every time.

### Compact and modern design

The KSIX 2025 is not only powerful but also boasts a minimalist and elegant design, perfect for display in any shop. With compact dimensions of 63x17.8x18.5cm and a weight of only 9.4kg, this machine takes up very little space and is easy to move, making it the perfect solution for any commercial setting.

#### Protector alignment machine

The KSIX 2025 Plotter comes with an additional small machine that secures the phone and perfectly aligns the protector before applying it, ensuring a total fit and air bubble-free adhesion.
