

DESCRIPTION

A stronger charger for your routine: The KSIX 30W combines superior power, compact design and advanced technologies so you never run out of energy. At just 1.5 cm thin, it fits in any pocket, bag or briefcase without taking space. Its two ports, USB-C and USB-A, let you charge from an iPhone® 15 to tablets and accessories quickly and safely. With Power Delivery, PPS and Quick Charge 3.0 you get more speed, protection and efficiency. It is the natural evolution of the 20W charger, with the extra strength your day demands.

Extraslim design for clutter-free travel

This charger is only 1.5 cm thick, making it the perfect ally to take everywhere. It fits in pockets, bags or crowded power strips without blocking other plugs. Less bulk, more freedom: travel light without giving up the energy you need. Though small, its housing is robust and ready for daily use. A discreet, tough and practical accessory that suits both office hours and your weekend getaways.

Extra power with two versatile ports

The USB-C port delivers 30W with Power Delivery and PPS, while the USB-A port reaches 18W with Quick Charge 3.0. That means you can charge an iPhone® 15, a Samsung Galaxy®, a Google Pixel®, tablets or even earbuds quickly and safely. The advantage is clear: more power than the 20W model, ensuring reduced charging times for your most demanding devices. Two ports, zero excuses: plug in what you need and keep everything ready, without unnecessary waiting.

GaN technology for greater efficiency

Thanks to GaN components, this charger packs higher power into a smaller body, with less heat and more stability. For you, that means quick, safe and quiet sessions without overheating. It is also more energy-efficient, helping the planet while taking care of your devices. Perfect for crowded sockets, dynamic offices or travel, where reliability is key in a light and compact format. Power without drama, all under control.

Power Delivery for fast and safe charging

The USB-C port with Power Delivery automatically adjusts voltage and current for each device, protecting the battery and speeding up charging. Your iPhone®, iPad® or Android® smartphone gets the exact energy it needs without risk. Less time plugged in, more time for you. It also prolongs battery life with smart management. At home, at work or while travelling, PD guarantees every charge is stable, reliable and fast.

PPS: smart care for your battery

The PPS (Programmable Power Supply) system dynamically adjusts voltage and current during charging, offering precision in real time. The result is a battery that runs cooler, lasts longer and stays protected. Next-generation smartphones such as Samsung Galaxy® or Google Pixel® take full advantage of this feature. For you, it means quicker, smarter and safer sessions. PPS turns a simple plug into a charger that understands your device's needs and adapts like a glove.
