

DESCRIPTION

Rokid Glasses bring augmented reality, a built-in camera and a dual-eye display together to place useful information exactly where you need it. Light, comfortable and designed to move with you, they combine AI, voice control and a clear visual overlay to help you work, learn or explore in a more intuitive way. With an all-day battery and a fully hands-free experience, they add a smart layer of information to your daily routine effortlessly.

Move freely throughout the day

With a balanced and portable build, these glasses are designed to be worn for hours without discomfort. Their comfortable fit adapts to work tasks and casual moments alike, whether you're commuting, creating or multitasking. The dual-eye display provides clear and stable visuals in both eyes, offering a natural and immersive viewing experience that keeps up with your pace without distracting you.

See information exactly where you need it

The dual-eye display projects data, directions and visual content directly into your field of view, so you can check what you need without looking away from your surroundings. Ideal for following instructions, reviewing information or interacting with digital elements while staying in motion. It's a seamless way to keep essential details in sight without relying on your phone or losing focus.

Capture what you see without stopping

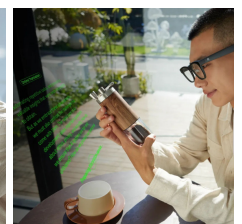

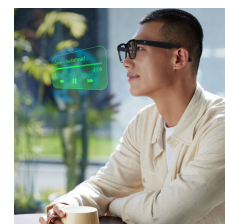

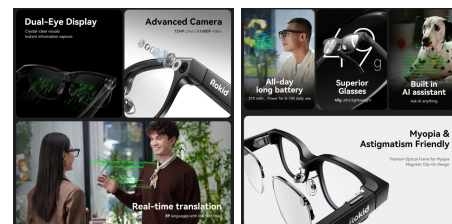

Rokid Glasses feature an integrated camera that lets you take photos and record videos from your own perspective. Perfect for documenting workflows, saving ideas or capturing moments hands-free. What you see is exactly what you record, making them a practical tool for both work and leisure. A smooth, intuitive way to document your world without interrupting what you're doing.

Control everything without stopping what you're doing

Interact with the glasses using voice commands to open functions, search for information or perform quick actions. Keep your hands free and your attention on the task while the technology responds naturally and efficiently. Whether you're working, learning or on the move, voice control creates a faster, more comfortable flow without pauses or distractions.

Keep going without worrying about battery life

The battery is built to last through your day, supporting AR functions, camera use and controls without constant recharging. Ideal for long work sessions, training, exploration or daily routines, they deliver consistent performance that adapts to your pace. A device ready to follow you from the moment your day starts until you switch off.
