

## DESCRIPTION

Rokid Max 2 transforms the way you work, play and enjoy content by projecting a large virtual screen directly in front of your eyes wherever you are. Light, comfortable and designed to move with you, they combine high-resolution micro-OLED panels, a 120Hz refresh rate and adjustable dioptres for a clear and personalised visual experience. Ideal for productivity, entertainment or working on the go, they turn any space into an immersive environment without needing an external display.

### Enjoy a giant screen anywhere you go

With dual micro-OLED panels, Rokid Max 2 gives you the sensation of watching a screen of up to 360 inches right in front of you. Whether you're on a plane, on the sofa or at the office, you can watch films, play games or work with impressive clarity. The 120Hz refresh rate delivers smooth motion and an immersive experience, turning any place into your personal cinema or portable workspace.

### Clear viewing adapted to your vision

Rokid Max 2 includes independent dioptre adjustment for each eye, allowing you to compensate for myopia up to -6.00D without additional lenses. This ensures sharp and comfortable viewing for long periods. With 600 nits of brightness, visibility remains excellent even outdoors or in well-lit environments. A system designed so you always see clearly, perfectly adapted to your actual visual needs.

### Comfortable for long sessions

Its lightweight and well-balanced design allows you to wear it for extended periods without fatigue. The passive ventilation system reduces fogging and keeps the experience comfortable, whether you are multitasking, watching a series on the move or reviewing documents. Discreet, portable and easy to carry, they naturally fit into the way you consume information.

### Connect your devices and expand your workspace

Compatible with smartphones, tablets, consoles and computers, Rokid Max 2 turns any device into a large-screen experience. View multiple windows, enlarge documents or enjoy gaming with greater comfort without relying on a physical monitor. A perfect tool for professionals working remotely, students or creators who need a flexible digital space.

### Your entertainment, more immersive than ever

With a 120Hz refresh rate, vivid colours and audio delivered through your connected device, Rokid Max 2 makes your content feel more engaging. Perfect for films, series, gaming or light augmented reality experiences, they let you enjoy without distractions or taking up space. A new way to disconnect, focus or immerse yourself in what you love.
