

## DESCRIPTION

KSIX ClipOn are Open-Ear clip-style earbuds designed to keep you comfortable all day long. Their C-Bridge design connects both capsules with a flexible structure that adapts to your ear without pressure. They don't sit inside the ear canal, allowing you to enjoy your music while staying aware of what's happening around you. A healthier alternative to traditional in-ear TWS earbuds for extended use, ideal for city life, work or light workouts. Their discreet, modern look fits seamlessly into any routine, enhancing your listening experience without isolating you from your surroundings.

### Comfortable and discreet clip design

The clip-style structure features the C-Bridge design, a continuous frame that connects both capsules and distributes weight evenly for a natural fit. The Open-Ear format avoids insertion into the ear canal, offering a lighter and more comfortable experience. The dual capsule architecture ensures balance and a modern, unisex aesthetic. The soft-touch finish feels pleasant against the skin even after hours of wear. Designed for those who want lifestyle tech with style, they combine function and design in a format that works just as well in the office as it does in your daily plans.

### Stable fit for life on the move

Thanks to the C-Bridge design and dual capsule system, ClipOn earbuds stay securely in place without squeezing. The flexible structure gently wraps around the ear and remains stable while walking, climbing stairs or moving around the city, giving you total freedom. They don't create pressure or fatigue, so you can wear them for hours without noticing them. Ideal for urban activity, commuting or light sport, with that "wear and forget" feeling. Perfect for music and calls while staying on the move, with no cables and no constant readjusting.

### Open and natural listening

The Open-Ear sound experience is designed for natural, balanced listening. Enjoy music, podcasts or calls while staying aware of your surroundings – essential for moving safely through the city or working in shared spaces. Touch controls let you manage playback, calls and volume with a simple gesture, without taking your phone out of your pocket. They don't block your ears or create a sealed sensation, helping reduce listening fatigue compared to traditional in-ear earbuds. So you can use them for longer, comfortably and effortlessly.

### Designed to last all day

Made from lightweight and durable ABS, they are built to accompany you through long days without discomfort. They provide up to 4 hours of playback per charge and up to 15 hours with the charging case – ideal for a full day out. The compact case fits easily into a pocket or bag and features a front LED indicator so you can check battery status at a glance. With an approximate charging time of 2 hours, they're always ready when you need them, keeping everything under control.

### Simple connectivity for every moment

Wireless pairing is quick and easy, so you can start using them within seconds with your smartphone or tablet. They are compatible with iPhone®, Android® devices such as Samsung Galaxy® or Google Pixel®, and other common devices.

They work just as well for calls, music or video meetings, adapting to your daily rhythm. Ideal for work, commuting or relaxing at home, offering a smooth and interruption-free experience. A versatile solution for those who want comfort, connectivity and freedom in one accessory, ready to go wherever you do.
