

## DESCRIPTION

KSIX Sense Circle is a sensor light designed to bring comfort, visibility and practicality to display cabinets, shelving and small open spaces around the home. It switches on only when needed, provides soft, adaptable lighting for everyday use and helps you move around at night with greater safety and comfort without turning on the main lights. Compact, discreet and USB-C rechargeable, it installs easily on smooth surfaces thanks to its magnetic adhesive base, offering a simple solution to improve your day-to-day lighting.

### Automatic light to move more easily

Sense Circle turns on automatically when it detects movement, providing a soft, comfortable and highly practical support light for everyday use. It is perfect for display cabinets, shelving and small open spaces where extra lighting improves visibility without being intrusive. At night, it helps you move around more safely and comfortably without switching on the main light, creating a pleasant sense of calm and wellbeing. As it only activates when needed, it is both efficient and convenient for daily use.

### Technology that adapts to the moment

It features a PIR motion sensor with ambient light detection, so it only turns on when the environment requires it. With a range of up to 6 metres and a 120° angle, it covers small spaces and passage areas with an even, soft and pleasant light. You can also choose between three colour temperatures, 3000K, 4500K and 6500K, and adjust the brightness to suit each moment. In addition, it includes night, day and always on modes to adapt to your routines and create a more comfortable, flexible and natural lighting experience at home, without glare and with just the right amount of light. Designed to follow you without getting in the way.

### Convenient battery life for your daily routine

Its integrated 1000 mAh battery provides up to 6 hours of autonomy, supporting your daily use without relying on disposable batteries. When it is time to recharge, the included USB-C to USB-A cable makes it easy from the very first use, fitting seamlessly into your routine. A fast charge of around 2 hours gets it ready to use again quickly, allowing you to move it from one room to another with total ease. As it works without fixed wiring, you can place it wherever it suits you best and enjoy a practical, flexible solution that is always ready when you need it. Everything under control at home.

### Discreet design that fits your home

Its round, minimalist design blends into any interior, offering a discreet lighting solution without cluttering the space. Thanks to its compact XS format, it fits exactly where needed and is ideal for display cabinets, shelving, furniture or small open corners. It installs easily on smooth surfaces using a magnetic adhesive base, with no tools required. The light then attaches magnetically to the base, so you can remove, reposition or recharge it with complete ease.

## TECHNICAL SPECIFICATIONS.
