

Kingsmith STE001 Magnetic Stepper, 10 Levels, 3 Inclines, 120 kg, LCD Display, App

DESCRIPTION

The Kingsmith STE001 Magnetic Stepper is designed to deliver an intensive cardio workout while taking up minimal space. Its magnetic resistance system with 10 resistance levels, combined with three adjustable incline positions, allows you to tailor the intensity to your fitness level. Featuring an LCD display, integrated heart rate sensors, a mobile device holder and a convenient folding design, it provides a comfortable, efficient and space-saving training experience.

More intense workouts with adjustable incline

The STE001 features three incline levels that simulate different gradients to increase workout intensity and engage more muscle groups. Adjust the incline to match your fitness level or the goal of each training session.

10 levels of magnetic resistance

Its magnetic resistance system, assisted by a hydraulic cylinder, offers 10 resistance levels to personalise every workout. From light activation sessions to more demanding exercises that improve endurance and increase calorie burn.

Real-time workout tracking

The LCD display shows key workout metrics including time, calories burned and step count. Integrated handrail sensors also measure your heart rate, allowing you to monitor your effort throughout every session.

Stay connected while you train

Thanks to Bluetooth connectivity, the STE001 is compatible with the KS Fit and Kinomap apps, allowing you to track your progress and access virtual routes for a more engaging and motivating workout experience.

Foldable design for easy storage

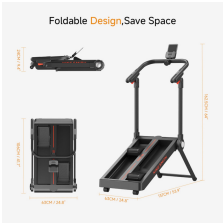

Its folding system reduces the machine's height to just 24 cm, making it easy to store under a bed, sofa or in any compact space. Integrated transport wheels allow it to be moved effortlessly from one room to another.

Comfort in every workout

The non-slip pedals provide secure footing throughout your workout, while the mobile device holder lets you follow training sessions, check the app or enjoy multimedia content without losing sight of your progress.

Robust and stable construction

Built for everyday use, it supports users weighing up to 120 kg and features a solid frame that delivers excellent stability, even during high-intensity workouts. Its 48 cm stepping motion provides a smooth and natural movement with every step.

TECHNICAL SPECIFICATIONS.
