HEAD AquaMotion Pro bone conduction headphones, water sports, IP68, ENC, 8-hour battery life, adjustable headband, 32 GB, Blue

DESCRIPTION

Water changes the way you train, but it does not have to leave music behind. HEAD AquaMotion Pro use bone conduction technology to turn sound into vibrations that travel through the bones of the skull to the cochlea in the inner ear, without relying on the ear canal or eardrum. This keeps your ears open while you complete every length. The 32 GB internal memory lets you store up to 10,000 songs directly on the headphones, so you can listen to music in the water without relying on your phone. The included adjustable band keeps them secure during push-offs, turns and changes of pace, while IP68 protection allows them to be submerged to a depth of up to 2 metres. With up to 8 hours of battery life, HEAD AquaMotion Pro are built for session after session, both in and out of the pool.

Made for the water

Designed specifically for swimming, their IP68 protection allows them to be submerged to a depth of up to 2 metres and withstand continuous contact with water during pool sessions. Their secure fit stays in place as you swim, so you can focus on every length, turn and push-off with headphones made to be part of your training both in and out of the water.

Bone conduction technology

HEAD AquaMotion Pro turn music into vibrations that travel from the cheekbones through the skull to the inner ear. Because the sound does not need to enter through the ear canal, the headphones sit outside the ear and provide a comfortable fit while swimming. Underwater, the 32 GB internal memory keeps your music playing so it can stay with you throughout the session.

10,000 songs and more

Wireless connectivity is lost once you go underwater, which is why HEAD AquaMotion Pro include 32 GB of internal memory. Store up to 10,000 songs directly on the headphones and head into the pool without relying on your phone or an active connection.

Up to 8 hours of battery life

With up to 8 hours of battery life, there is enough power for several sessions before you need to recharge. From fast intervals to longer endurance sets, your music keeps going throughout your pool workout, so it is the final stroke — not the battery — that brings the session to an end.

Clearer calls back on dry land

Out of the water, ENC technology reduces background noise picked up by the microphones so your voice comes through more clearly during calls. Ideal for taking a call before or after training, even in changing rooms, sports facilities or busy areas, without the surroundings getting in the way of what matters.

TECHNICAL SPECIFICATIONS.

Color	**Black**
Technology	**Bone conduction**
Volume control	**Yes**
Operating range	**10 m**
Autonomy	**Up to 8 hours**
Battery capacity	**170 mAh**
Charging time	**1 hour**
Degree of protection	**IP68**
Target audience	**Unisex adults**
